Objectives

Computer Science and Systems Engineering double major seeking a **Summer 2027 internship** to apply skills in software development, algorithm design, and systems analysis methodologies toward roles in software engineering or systems engineering.

Skills

Programming Languages: Python, Java, SQL, C#, C, Assembly, Groovy | **Backend:** EC2 Instances, Elastic Beanstalk, PostgreSQL |

Methodologies: Systems Analysis, Decisions Analysis, Requirements Engineering

Education

University of Virginia (UVA), Charlottesville, VA (**Graduating May 2028**)

Majors: Systems and Information Engineering, B.S. | Computer Science, B.S.

Work Experience

Idemia Public Security: Software Engineering Intern (Summer 2026 - December 2026) | Reston, VA

- Engineered a **REST API** integration pipeline in **Groovy** and **JavaScript** on **Boomi (iPaaS)** that transformed and cached ADP employee records to sync with Salesforce, automating real-time identity provisioning and deprovisioning tied to employment status and replacing manual onboarding/offboarding for the entire **5,000+ person** Public Security department.
- Built an internal IT support agent using **Microsoft Copilot Studio**, **Power Automate**, and **Dataverse** that handles common Tier 1/2 helpdesk requests without human involvement, freeing IT staff for higher-priority work.
- Designed **Power Automate** escalation flows for manager approval and authored the agent's instruction set and knowledge base to ground its responses.
- Retained beyond standard internship term through Dec 2026 based on performance, continuing to lead data integration and AI chatbot initiatives.

Generative Charities Internship: Software Engineer Intern (Summer 2025) | Centreville, VA

- Built a **full-stack web platform** using **Django** and **Python** that gives underfunded U.S. charities a public-facing space to showcase their mission, programs, and impact data to donors.
- Architected the cloud infrastructure on **AWS**, **PostgreSQL (RDS)** for persistent storage, **Elastic Beanstalk** for deployment, **EC2** for hosting, which enabled scalable delivery without dedicated DevOps support.

Metro DC-VA state referee: State and Competitive Travel soccer referee (2019-current)

- Responsible for the safety of all the players and spectators during the duration of the games.
 - Ensure all the FIFA game rules and regulations are enforced to allow everyone attending the game to play fair and have fun.
-

Research

Natural User Interface (NUI) in Virtual Reality (2025)

- Analyzed prior research on the impact of gesture-based interaction on student learning outcomes.
 - Developed an interactive Towers of Hanoi game in **Unity (C#)** to study peer-to-peer teaching and learning.
-

Coursework Experience

Systems Engineering Concepts (SYS 2001) (2025) | ADA Digital Accessibility Case Study | Selected as top group to present to class

- Ran a full **systems engineering lifecycle**, consisting of **stakeholder analysis**, **requirements**, **decision analysis**, **recommendation** on UVA's WCAG 2.1 A/AA compliance gap for ~2,400 faculty across 12 schools.
 - Applied **decision analysis** to choose a two-tier opt-in (started → monthly reminders; completed → stop) over fixed-cadence emails, using frequency as the behavioral lever.
-

Clubs and Extracurricular Experience

Mechatronics and Robotics Society (MARS): Computer and Systems Engineering Subteams (2025 - present)

- Apply **systems analysis** to design and integrate a **NASA Lunabotics** competition robot, using **Python**, **C++**, **GitHub**, to connect all subsystems.
