EDUCATION

University of Virginia (UVA)

Charlottesville, VA | Graduating May 2028

Majors: Computer Science, B.S. | Systems and Information Engineering, B.S.

Relevant Coursework: Data Structures and Algorithms 1 & 2, Computer Systems Organization, Mobile App Development, Systems Engineering Concepts

WORK EXPERIENCE

Idemia Public Security | *Software Engineering Intern*

Summer 2026 – December 2026 | Reston, VA

- Coded a REST API integration in Groovy and JavaScript on Boomi that syncs ADP employee records to Salesforce, automating account provisioning and deprovisioning for the **5,000+ person** Public Security department.
- Replaced manual onboarding so new and returning employees get access **2 weeks sooner** on average.
- Built an IT support agent in Copilot Studio and Power Automate, using a Dataverse MCP (Model Context Protocol) server, that resolves Tier 1/2 helpdesk requests, freeing **~3 hours per day** for each IT employee.
- Designed the agent's manager-approval escalation flows and wrote its instruction set and knowledge base.
- **Retained past the standard internship term** through December 2026 based on performance.

Generative Charities Internship | *Software Engineer Intern*

Summer 2025 | Centreville, VA

- Built a full-stack Python/Django platform as the **sole developer**, with charity search, designed to connect donors with charities that match their interests.
- Integrated Epic's FHIR API to retrieve **real MyChart medical records** from consenting test users, laying the groundwork for recommending charities tied to a donor's health history.
- Deployed the platform on AWS (Elastic Beanstalk, EC2, PostgreSQL on RDS) on my own, with no DevOps support.

PROJECTS

Grounds: Crowdsourced Café Guide (CS 3240) | *Requirements Lead & Developer*

In Progress, Fall 2026

- Developing in Python and Django with a 5-person team; the web app shows real-time seating, noise, and outlet availability at Charlottesville cafés.
- Turned a 25-person survey, café observations, and competitor analysis into **24 prioritized user stories**.
- Applied UI/UX heuristics, including a report flow that takes under 10 seconds and labels showing how fresh seating data is.

Bucket List App

In Progress, Fall 2026

- Building an Android app in Kotlin with Jetpack Compose, applying UI/UX principles to the interface design.

ADA Digital Accessibility Case Study (SYS 2001) | *Selected as top group to present*

2025

- Built a Power Automate workflow that sends compliance reminders tailored to each faculty member's status and reminder preference; presented it to the UVA office sponsoring the project.
- Analyzed UVA's WCAG 2.1 A/AA compliance gap across **~2,400 faculty** in 12 schools using a systems engineering lifecycle.

Interactive Towers of Hanoi Game

2025

- Built a gesture-controlled VR game in Unity (C#) to study how natural interaction and peer teaching affect learning.

SKILLS

Languages: Python, Java, JavaScript, Kotlin, Groovy, C#, C/C++, SQL, Assembly

Frameworks & Protocols: Django, Jetpack Compose, Unity, Model Context Protocol (MCP)

Cloud & Data: AWS (EC2, Elastic Beanstalk, S3, RDS), PostgreSQL, Dataverse

Tools & Platforms: Git/GitHub, Android Studio, REST APIs, Epic FHIR API, Boomi, Salesforce, Copilot Studio, Power Automate

Methods: Data Structures & Algorithms, Requirements Engineering, Systems Analysis, UI/UX Design

CLUBS AND EXTRACURRICULAR EXPERIENCE

Mechatronics and Robotics Society (MARS) | *Computer and Systems Engineering Subteams*

2025 – present

- Built an autonomous maze-solving robot that learns a maze through trial and error and remembers the solved path.
- Integrating subsystems of a NASA Lunabotics competition robot in Python and C++, applying systems analysis.

Metro DC-VA State Soccer Referee | *State and Competitive Travel*

2019 – present
